Project
Smart Contract Applications

Problem Description:

For each team you will have a problem to solve using Smart Contracts. You will be given a link containing the smart contract and how it works and your task is to run this smart contract and write a report about it.You can see which project you are assigned to from this link

Report Specifications:

1. The report should contain an explanation for every part of the code.That includes what does this mean and why it is used.
2. A Flow chart showing the flow of your smart contract.
3. Your Understanding of the problem you are required to solve and why this smart contract solves it.
4. Test cases that showcase your project and that the smart contract you have run is working as expected.
5. Logs of your transactions passing to the smart contracts and explaining what happens in your blockchain (Hint: Like the list of transactions you can see in etherscan).
6. Mention weak points in your smart contracts and how it can be solved or mitigated.
7. (Bonus) The report should be written in Latex.
